

A Complete Line of Packaging Options for Clinical Trials

- KEY-PAK®
- ECOSLIDE-RX®
- INJECTASLIDE™
- SYRINGE PACK & VIAL PACK

In terms of requirements and restrictions, few industries are as demanding as the world of clinical trials. We have dedicated years to developing breakthrough packaging solutions that have become widely accepted by some of the most respected names in the pharmaceutical industry.

Our packages provide the Child-Resistant features for clinical trial materials that meet the regulatory requirements set forth by the Consumer Product Safety Commission.

Medication Adherence by each patient with a prescribed dosing regimen is critical to truly understanding efficacy of a study drug

in a clinical trial. Our packages can be designed to aid in medication adherence by incorporating calendarization which helps prompt patients take the right dose at the right time.

For clinical trials where dosing data should be precisely recorded, both the Key-Pak and Eco-Slide RX 3.0 can incorporate an electronic module and printed sensor grid which remain invisible to the patient. This hidden technology (developed in collaboration with Information Mediary Corporation) records the time, date and location when a dose is removed from the blister package. The data can then be retrieved wirelessly and incorporated into the clinical trial research.
